Fume Alert™

Wireless, portable protection to deter criminal activity.

The Control Panel is the brains of the system and is powered by 110v or 12v battery.

Fume Alert is a portable intrusion alarm system for monitoring the status of a fumigation, and deterring intruders.

The system consists of a cellular control panel, wireless infrared motion sensors and sirens that can be programmed to alarm when there is activity at the job site. The panel can also notify the fumigator by SMS Text messages when specific sensors are triggered. Up to five cell numbers can be notified of a trigger event.

The fumigator places sensors and sirens on the outside and inside of the structure; each sensor is assigned its own zone number, this zone information is SMS texted when a sensor is triggered. It is recommended that you configure the system whereby exterior zones are between 10 and 19, and interior zones are between 20 and 29 so you can easily understand from the SMS text message if the trigger event is an exterior or interior area of the fumigation.

Photos from a real live fumigation.

Controller - 110v. or 12v. powered. Receives the message from the wireless sensors, then triggers alarms and/or sends text message to the fumigator.

Wireless Infrared Motion Sensors placed in key traffic areas alert any human motion.

Range Extender - Use these Repeaters to extend the range between wireless sensors and the controller.

Perimeter Protection - IR Motion Sensors placed between the tent and structure, near doors, will pick up intruders inside the tent.

Wireless Sirens and flashing lights. These are placed throughout the house, can be programmed for one minute or more.

Fumigators Starter Kit:

1 Control Panel with Cellular SIM Card* (110v.)
(includes carrying case and power cord)
8 IR Motion Sensors
4 Wireless Sirens/Flashing Lights
2 Repeaters/Range Extenders
(above come in divided plastic case)

*SMS Messages Require $40 per month telemetry package

Fume Alert is a deterrent only. No guarantees are made that this will prevent any criminal activity or protect any property. When used properly it should alert criminals to leave a property.
